

Protest against biased reporting in the British medical journal "The Lancet"

This "scientific" article published in the famous British medical journal "The Lancet", denigrates Israeli doctors with unproven allegations and accusations.

This is not about medicine but politics exposed in an unfair, unilateral manner.

What we know from real life is that Israeli doctors struggle day by day to save lives, including those of sick Palestinians. For example, in our medical center at Wolfson, Holon, Israel, in cooperation with "Save-a-Child's Heart" philanthropic organization, we operated on and saved the lives of more than 1500 Palestinian kids suffering from cardiac malformations.

I believe that the article below, published in "The Lancet" warrants a firm rebuttal from any honest organization and individual.

Prof. Tiberiu Ezri

Head, Department of Anesthesia

Wolfson Medical Center

Holon, Israel

Israeli doctors accused of collusion in torture
